What's covered?

The CompEx Ex14 Responsible persons qualification has been developed in consultation with industry to ensure the core competence of the responsible person. This refers to those in senior supervisory roles, i.e. persons directly responsible for the management of staff, processes and procedures relating to potentially explosive atmospheres, electrical and non-electrical (mechanical) equipment, protective systems, and installations.

The course aims to ensure that 'Responsible persons' as defined in IEC60079-14 and/or IEC60079-17 have the knowledge, skills and competencies to enable them to meet the requirements of these IEC standards, relevant directives and national laws.

The qualification will assess the level of competency of the individual with regards to these standards to enable them to manage operatives who are involved in selection, erection, inspection and maintenance duties of equipment remains in explosive atmospheres. The content includes theoretical application for the various aspects of the role. Experience and feedback received has shown that candidates gain a great deal from the guided discussions, so participation is actively encouraged.

Who should participate?

This qualification is suitable for persons in managerial or supervisory roles who are directly responsible for the management of staff (including sub-contractors), processes and procedures relating to explosive atmospheres, such as, equipment, protective systems and installations.

Please note that Ex14 is an advanced course. As such, the tutor will not have time to cover foundational concepts in detail. If you feel you would benefit from a stronger grasp of the basics, we strongly recommend completing the '[CompEx Foundation \(ExF\) Explosive Atmospheres](#)' course before attending Ex14.

What will I learn?

Candidates that successfully complete the Ex14 Responsible persons qualification will be able to:

- Know and understand the applicable national regulations, directives and IEC standards which are applicable to hazardous locations e.g. ATEX, DSEAR, EPS Regulations, HSW Act, COMAH.
- Identify and understand the characteristics and terminologies associated with common hazardous gases, vapours and dusts.
- Understand the principles of hazardous area classification, how it is applied, and the documentation required to manage the process.
- Understand the various types of ignition source and their effects within hazardous locations.
- Know and understand the protection concepts, how certified Ex electrical and non-electrical maintains its protection concept and how it is to be selected, installed, inspected and maintained.
- Know and understand the importance of competency management within an organisation, including a risk-based methodology for personnel involved with the inspection of electrical equipment in explosive atmospheres.
- Know and understand the principles of Ex asset management, including examples of how to create and analyse inspection plans and prioritise remedial repairs.
- Understand the key principles and key aspects of equipment repair, including management responsibilities and documentation.

What are the entry requirements?

All candidates, both new and existing CompEx candidates, are required to register themselves onto the CompEx system prior to confirmation of booking on the course (instructions will be provided)

- Higher National Certificate (HNC) or equivalent
- General understanding of relevant electrical engineering, including the ability to read and assess relevant engineering drawings
- Basic knowledge of quality assurance, including the principles of auditing, documentation control and traceability
- Employer letter of endorsement stating that the candidate is, or is working towards the role of a Responsible Person/Duty Holder

Candidates should ideally possess the entry requirements listed above, however, the decision is also based on the discretion of the candidate's employer, who will already be aware of the candidate's knowledge and experience. All candidates should be appropriately qualified electro technical and/or a mechanical craftsperson's, or must be able to provide an employer endorsed letter to validate their experience in the relevant discipline. Candidates must sign a declaration to that effect as part of their registration.

Please note:

IEC 60079-14 and IEC 60079-17 standard - Knowledge and skills - Responsible Persons

specifies the following.

Responsible persons who are responsible for the processes involved in the design, selection, erection, inspection, and maintenance of explosion protected equipment shall possess, at least, the following:

1. General understanding of relevant electrical engineering
2. Understanding and ability to read and assess engineering drawings.
3. Practical understanding of explosion protection principles and techniques
4. Working knowledge and understanding of relevant standards in explosion protection, particularly IEC 60079-10-1, IEC 60079-10-2, IEC 60079-14, IEC 60079-17 and IEC 60079-19
5. Basic knowledge of quality assurance, including the principles of auditing, documentation, traceability of measurement and instrument calibration

Delegate should have the knowledge of 1 to 5 above in advance of attending this course.

Requirements from 3 to 5 above, can be obtained by attending our [CompEx Foundation ExF](#) 2-day course. We highly recommended completing an ExF foundation course in advance of attending this Ex14 course, for successful completion.

English Language Competency - A good standard of written and spoken English is important to engage effectively with this programme. While formal certification (e.g. IELTS) is not required, learners whose first language is not English should have a self-assessed proficiency equivalent to IELTS 5.5–6.0 or CEFR level B2. This level of competence will support learners in understanding course materials, contributing to discussions, and completing assessments where applicable.

How will I be assessed?

Candidates undertake an online multiple-choice assessment and an online applied knowledge exam that covers the full Ex14 unit. For part of the assessment, candidates are expected to demonstrate their understanding by using documentation and information available to determine the correct answer. Please refer to the [Candidate \(Practitioner\) Information document](#) covering the HTML (Web) based exam delivery software requirements and responsibilities. (JTL 995 Rev.2 04/21)

Exam

The exam is split into two sections with a short break in-between:

Section 1 – Theory based exam (41 questions, 1.25 hours)

Section 2 – Applied knowledge exam (19 questions, 1.5 hours)

The exam is completed on day 4. **It is essential that all delegates allocate sufficient independent study time to prepare for the exam between day 1, 2 & 3.**

Please note, delegates require a laptop for the examination. The exam will be recorded as per CompEx requirements for remote invigilation.

Candidates who are successful in the assessments will receive a CompEx Certificate in Core Competence.
